

Contents

- 1 Some Useful Substitutions** 1
 - 1.1 Theory and examples 3
 - 1.2 Problems for training 20

- 2 Always Cauchy-Schwarz...** 25
 - 2.1 Theory and examples 27
 - 2.2 Problems for training 43

- 3 Look at the Exponent** 47
 - 3.1 Theory and examples 49
 - 3.2 Problems for training 67

- 4 Primes and Squares** 73
 - 4.1 Theory and examples 75
 - 4.2 Problems for training 89

- 5 T2's Lemma** 93
 - 5.1 Theory and examples 95
 - 5.2 Problems for training 111

6	Some Classical Problems in Extremal Graph Theory	115
6.1	Theory and examples	117
6.2	Problems for training	128
7	Complex Combinatorics	131
7.1	Theory and examples	133
7.2	Problems for training	148
8	Formal Series Revisited	153
8.1	Theory and examples	155
8.2	Problems for training	173
9	A Brief Introduction to Algebraic Number Theory	179
9.1	Theory and examples	181
9.2	Problems for training	200
10	Arithmetic Properties of Polynomials	205
10.1	Theory and examples	207
10.2	Problems for training	227
11	Lagrange Interpolation Formula	233
11.1	Theory and examples	235
11.2	Problems for training	259
12	Higher Algebra in Combinatorics	263
12.1	Theory and examples	265
12.2	Problems for training	282
13	Geometry and Numbers	289
13.1	Theory and examples	291
13.2	Problems for training	309
14	The Smaller, the Better	313
14.1	Theory and examples	315
14.2	Problems for training	327

15 Density and Regular Distribution	333
15.1 Theory and examples	335
15.2 Problems for training	350
16 The Digit Sum of a Positive Integer	353
16.1 Theory and examples	355
16.2 Problems for training	369
17 At the Border of Analysis and Number Theory	375
17.1 Theory and examples	377
17.2 Problems for training	394
18 Quadratic Reciprocity	399
18.1 Theory and examples	401
18.2 Problems for training	419
19 Solving Elementary Inequalities Using Integrals	425
19.1 Theory and examples	427
19.2 Problems for training	445
20 Pigeonhole Principle Revisited	451
20.1 Theory and examples	453
20.2 Problems for training	473
21 Some Useful Irreducibility Criteria	479
21.1 Theory and examples	481
21.2 Problems for training	501
22 Cycles, Paths, and Other Ways	505
22.1 Theory and examples	507
22.2 Problems for training	519
23 Some Special Applications of Polynomials	523
23.1 Theory and examples	525
23.2 Problems for training	543
